

WHAT IS ONSIP?

- OnSIP is a complete business phone service delivered over the Internet.
- With no PBX hardware to manage, it is a completely outsourced service.
- OnSIP is a total replacement for proprietary PBX and is built on leading open communication platforms.
- No contracts or commitment means you will never be stuck with a technology decision or vendor.

Our partners:

★★★★★ “This makes all the sense in the world for any company with multiple offices or remote employees.”

— John Fretz, IT Oversee (an OnSIP Customer)

WHY CHOOSE ONSIP?

Award Winning Service Provider — We are proud to be recognized as a leading provider of business class communication services.

- 2012 American Business Award Winner: Company of the Year — Business Services
- 2011 American Business Award Winner: Best Management Team — New Products & Services
- 2010 Red Herring Top 100 North America
- 2010 Top 50 Innovators to Disrupt the Market, By Heavy Reading

✓ No cost per user, extension or phone

While most service providers charge a flat fee per user, OnSIP charges nothing per user. Our customers tell us that other vendors charge “unlimited” per seat license fees which seem attractive on the surface but include minutes they never use. In some cases, competitors charge in excess of \$50 per user no matter how many calls are placed or received.

With OnSIP, you will pay \$0 per user. Customers save significantly on monthly service fees, even with above average calling volume. And when you add a phone at home or a phone in a conference room, there is no additional cost.

✓ Lower total cost of ownership

With Hosted PBX, a small business can get the features of a \$25,000 PBX with no capital expense. All you need is a phone or software-based phone. You will benefit from lower total cost of ownership with no on-premises equipment to manage or worry about.

✓ Free extension-to-extension and free Internet calls

OnSIP is built on the de facto VoIP standard protocol, SIP. As a result, calls between extensions are free. Additionally, you can make calls to other SIP addresses using OnSIP for free!

✓ Remote connectivity is simple

A hosted service is perfect if you have multiple offices or any type of virtual office environment. OnSIP was designed from scratch to work with users in multiple locations. To use the service, users can log in from anywhere there is an Internet connection. Home office staff members can use a phone at home to make and receive extension calls and calls to the main number as if they were right in the office.

✓ Use any IP phones

While most providers require that you buy their phone or use a proprietary set of phones, OnSIP works with your favorite SIP-compatible phone. In fact, we don't sell any phones at all. We can recommend a phone for you from vendors such as Polycom, SNOM, Aastra, Linksys and YeaLink.

✓ Advanced Features are included, many at no cost

Features such as Click-to-call are included. Click-to-call allows customers to put a button on their website inviting visitors to enter a phone number and request an immediate call back from the OnSIP customer. The OnSIP system immediately connects the OnSIP customer with the website visitor via a phone call. This popular CRM feature is generally available from other vendors at a cost of \$100s per month. OnSIP provides the service for free and only charges 2.9 cents per minute (standard calling).

✓ Commitment to open standards

OnSIP has always been committed to open standards. That's why OnSIP is entirely based on SIP, the de facto VoIP standard. Why is this important to you? For one, as hardware vendors roll out new SIP-based products, you can be sure that OnSIP will support them.

★★★★★ “A pretty eye-opening solution that moves business telephony into a very new place.”

— Ted Stevenson. VoIP Planet

FEATURES

THE BASICS

Call Management

- Hold
- Do Not Disturb
- Mute
- Call Waiting
- Redial
- 3-way Calling
