

TONER RECYCLING

Know - How

ECO footPRINT Toner Recycling

Businesses today are looking for ways to lower their impact on the environment, to work cleaner, smarter, and more responsibly. Kyocera's ECO footPRINT™ Toner Recycling Program offers our customers a way to do just that, taking all the effort out of recycling empty Kyocera toner containers.

WHERE IT ALL GOES

It might be easier to say where it doesn't go... to the landfill. That's right. 100% of every recycled Kyocera toner container is transformed into useful objects that serve a necessary function. Their partners at Close the Loop are able to repurpose the materials into items like pens, park benches, and even asphalt!

COMMITMENT TO THE ENVIRONMENT

ECOSYS Technology

Separating the toner from the long-life ceramic drum reduces waste to landfill

Energy Saving Toner

With a lower melting point, toner requires less energy to apply to paper

Eco-friendly Packaging

Recyclable packaging that minimizes the use of Styrofoam

Innovative Waste Toner System

Empty toner containers become waste toner containers, which are also recyclable

FAQs

HOW IT WORKS

The way it works is easy. Customers can request recycling boxes directly from Rhyme. Fill the boxes with depleted and waste Kyocera toner containers, seal and send to their recycling facility partner, **Close the Loop**, one of the world's largest take-back providers of ink and toner cartridges, which helps us in our sustainability efforts.

That's it! Kyocera sponsors the program at no cost to customers (no shipping or recycling costs). It's their way of saying thank you for helping us uphold our commitment to working in harmony with our environment.
